To Whom It May Concern:

Evon Dong Bing Bing worked in the Robotics and Autonomous Systems department at I2R, A*STAR under my supervision during the summer of 2019. Throughout her time with our organization, I developed a very high regard for Evon based on her remarkable, outstanding contributions that she made to our department that consistently impressed me.

With her exceptional critical thinking skills and high aptitude to learn, Evon has truly been a very productive intern whose works always surpassed my expectations. She pays close attention to intricate details and always strives to produce quality work. In a highly time-constrained environment, she thrives well under adversity.

Not only does Evon work well independently, she is also equally skilled in collaborative work which could be attributed to her strong written and verbal communication and her receptiveness to feedback. Evon's upbeat demeanor and enthusiastic attitude towards tedious assignments made her an enjoyable person to be around.

Evon is well-spoken and intellectual, and she lights up when talking about the various features of the robots and fundamental challenges of robotics programming. Undoubtedly, Evon was very keenly devoted to her work and her zeal in advancing the automation process was evident. In addition, she demonstrated notable problem solving and analytical thinking skills by being able to not only pinpoint problems but also use deductive reasoning to solve these issues.

Overall, Evon was always passionate when learning new skills and knowledge and was a quick learner. She managed to master C++ language and the basics of Robot Operating System (ROS) within a short period of time. Having an inquisitive mind and an earnest attitude towards learning, she would always ask interesting and in-depth questions about software development and the industry. When faced with challenges, she would often talk with her co-workers to acquire insights and tap into available resources, exhibiting her resourcefulness. Her never-ending quench for knowledge and ability has particularly awed me.

In closing, I would like to reiterate that Evon is truly an insightful, talented individual driven by a passion for programming and software development. She approached every task with great enthusiasm and effort and consistently seeks out constructive feedback. Having a person like Evon in one's team would be an asset and I wholeheartedly recommend her for any endeavor she chooses to pursue. Please let me know if you have any questions.

Sincerely,

Chen Yuda
Software Engineer
